

**FROM ZERO TO GOVERNANCE -
ONE ORGANIZATION'S
JOURNEY TO IMPLEMENTING
POWER PLATFORM
GOVERNANCE**

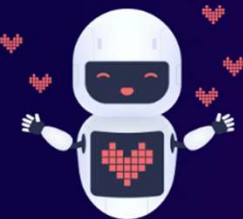

Lindsay Shelton
lindsayTshelton@gmail.com
LindsayTshelton.com

PHOTOGRAPHY DURING THE SESSION

Feel free to capture the moment! Taking pictures of the presentation, during the session is perfectly fine.

SELFIES WITH THE SPEAKER

We encourage interaction! If you'd like to take a selfie with the speaker, don't hesitate to ask. Most speakers will be happy to oblige during appropriate breaks.

RECORDING AND LIVE STREAMING

Recording or live streaming the session, in part or in full, is strictly prohibited. Thank you for respecting our content and Speakers.

LINDSAY SHELTON

She/her | Digital Workplace
Advisor

HELLO THERE!

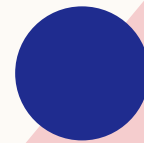

• lindsaytshelton.com | linktr.ee/lindsaytshelton |
lindsaytshelton@gmail.com

- Born and raised in Kansas City metro area (go Chiefs!)
- Proud cat mom
- BizApps/M365 MVP and MCT alumni
- Spent 10 years as a teacher before switching careers
- Hobbies include staring at my cats and being an expert on Bravo reality television shows
- Responsible for Microsoft 365 adoption and training for a global legal services organization

AGENDA

- Lindsay's path from zero to governance
- Four Pillars of (Cheap) Governance
 - Environments
 - DLP policies
 - Security Roles
 - Center of Excellence Starter Kit
- Tips and Tricks

FLASH BACK TO SEPTEMBER 2022...

Lindsay arrives home from
the first inaugural Microsoft
Power Platform Conference

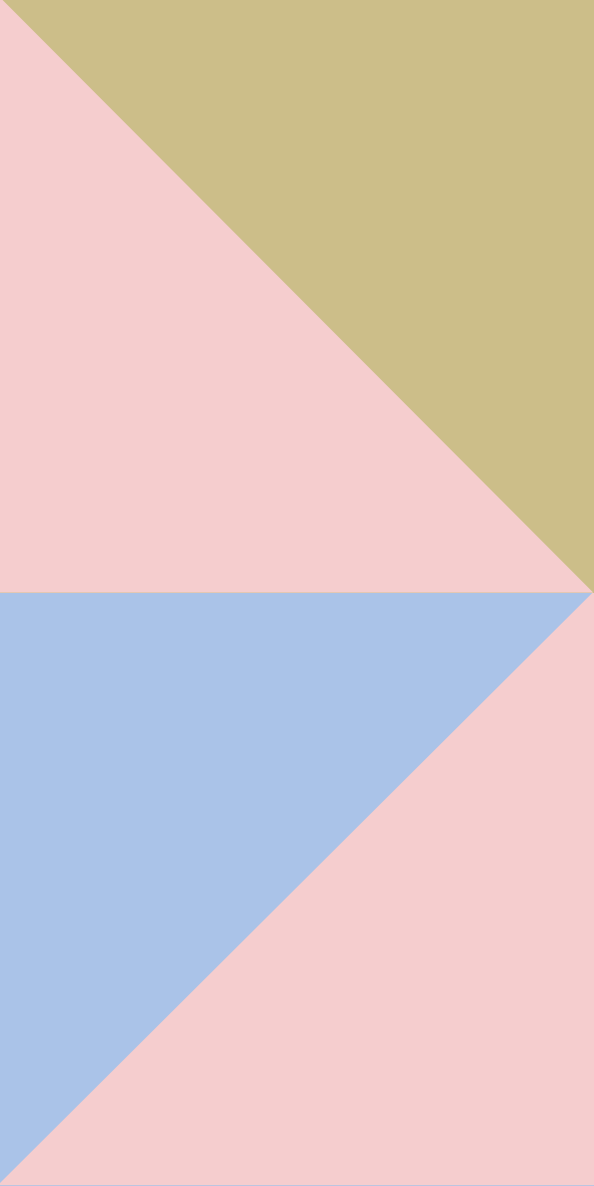

FLASH BACK TO OCTOBER 2022...

Lindsay logs into her work computer, does some research, and begins to react in horror as she realizes that there's a zero state of governance in her organization

WHAT IS A ZERO STATE OF GOVERNANCE?

ZERO STATE OF GOVERNANCE

SHADOW IT

Power users could be creating mission-critical items that IT knows nothing about; excessive use of resources like licenses

A MESS!

Users who leave are creating orphaned flows and apps; wild creation of environments and apps

SECURITY CONCERNS

Sensitive company data could be leaking through unvetted connectors; people could be accessing apps that you don't want

STOWERS INSTITUTE FOR MEDICAL RESEARCH

- Medical research non-profit
- 600ish users
- Somewhat Microsoft reluctant, depending on the lab or department

Stowers
Institute

SO, WHAT WAS GOING ON AT STOWERS?

SHADOW IT

The biggest problem we had, and we didn't know it until months after the primary power user had left

A MESS!

Only a handful of orphaned apps and flows, but no way to help users when someone left without off-boarding

SECURITY CONCERNS

Luckily, there were no leaks that we know of, though this was probably only due to low adoption

**WHERE DO YOU GO
WHEN THERE'S
NOTHING IN
PLACE?**

Anywhere you want!

HOW I GOT STARTED

**MICHAEL ROTH (WHO HELPED
ME MAKE THIS PRESENTATION)**

@michaelroth42

CRAIG WHITE

@platformspower

TWITTER

#SharingIsCaring

MICROSOFT LEARN

No, really!

BIGGEST SOURCE OF HELP – THE COMMUNITY!

- Don't be afraid to ask and reach out to people!
- You aren't a burden and people want to help.
- Pay it forward once you've been helped.

THE COMMUNITY COMING TO HELP ME

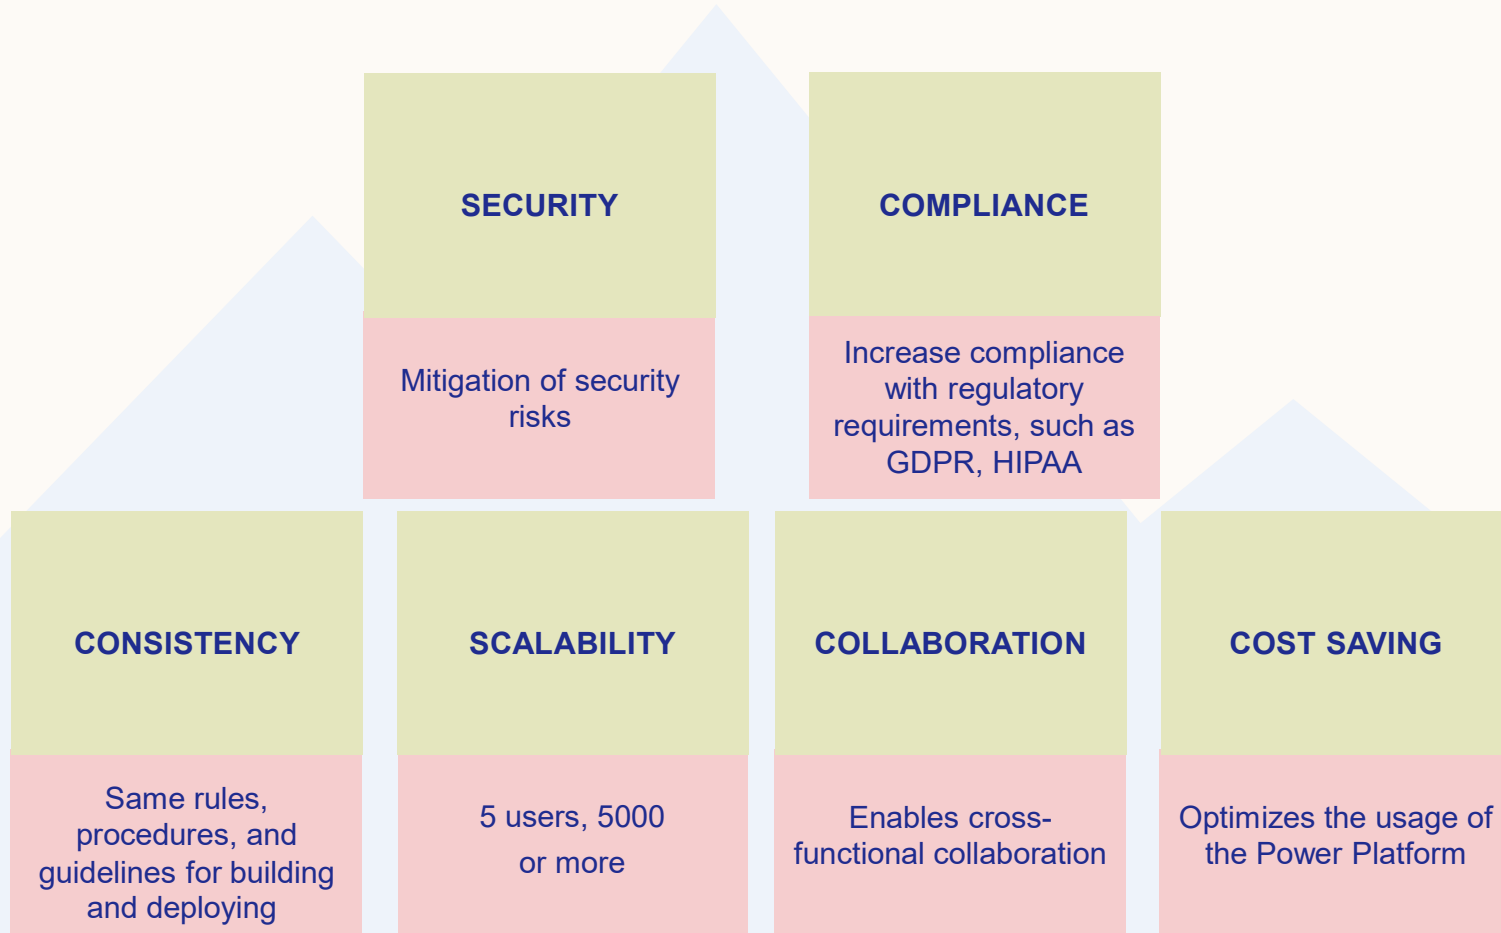

16

LINDSAY'S GOVERNANCE PHILOSOPHY

- After governance is in place... Empower users to create by encouraging adoption
- Allow your dedicated/trained makers a bit more freedom with DLP policies
- Develop relationships with your power users; they can become your evangelists
- Users can't break anything or screw anything up too badly with good governance
- Better to be safe than sorry

BUT WAIT, GOVERNANCE IS MORE..

FOUR PILLARS OF GOVERNANCE

ENVIRONMENTS

**DATA LOSS
PREVENTION (DLP)**

SECURITY ROLES

**CENTER OF EXCELLENCE/
MANAGED ENVIRONMENTS**

ENVIRONMENTS

Space to store and manage data, apps, flows and keep them separated from each other

Basically, big boxes

Default

Development
North America

Testing
Spain

Production
Nigeria

💡 That's the foundation
of ALM (Application
Lifecycle Management)

ENVIRONMENT TYPES

DATAVERSE FOR TEAMS

A "mini-database" right inside Teams, where you can store data. It's a simplified version of the full Dataverse

DEVELOPER

Intended for use only by the owner; security groups can't be assigned to dev env

PRODUCTION

Intended for permanent work in an org; use for business-critical solutions

SANDBOX

Non-prod but can be used for dev and test; run just a little slower than a prod environment

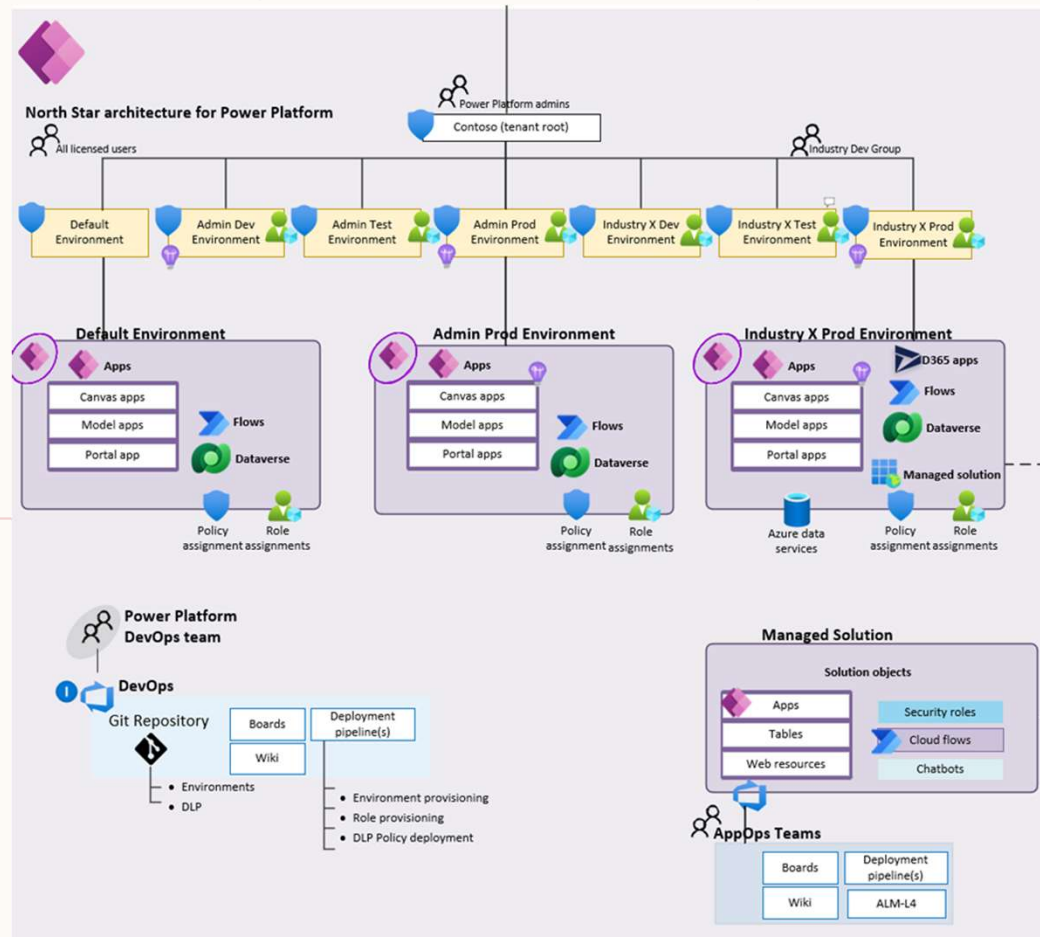

TRIAL

For short-term testing, expire after 30 days; limited to 1 per user

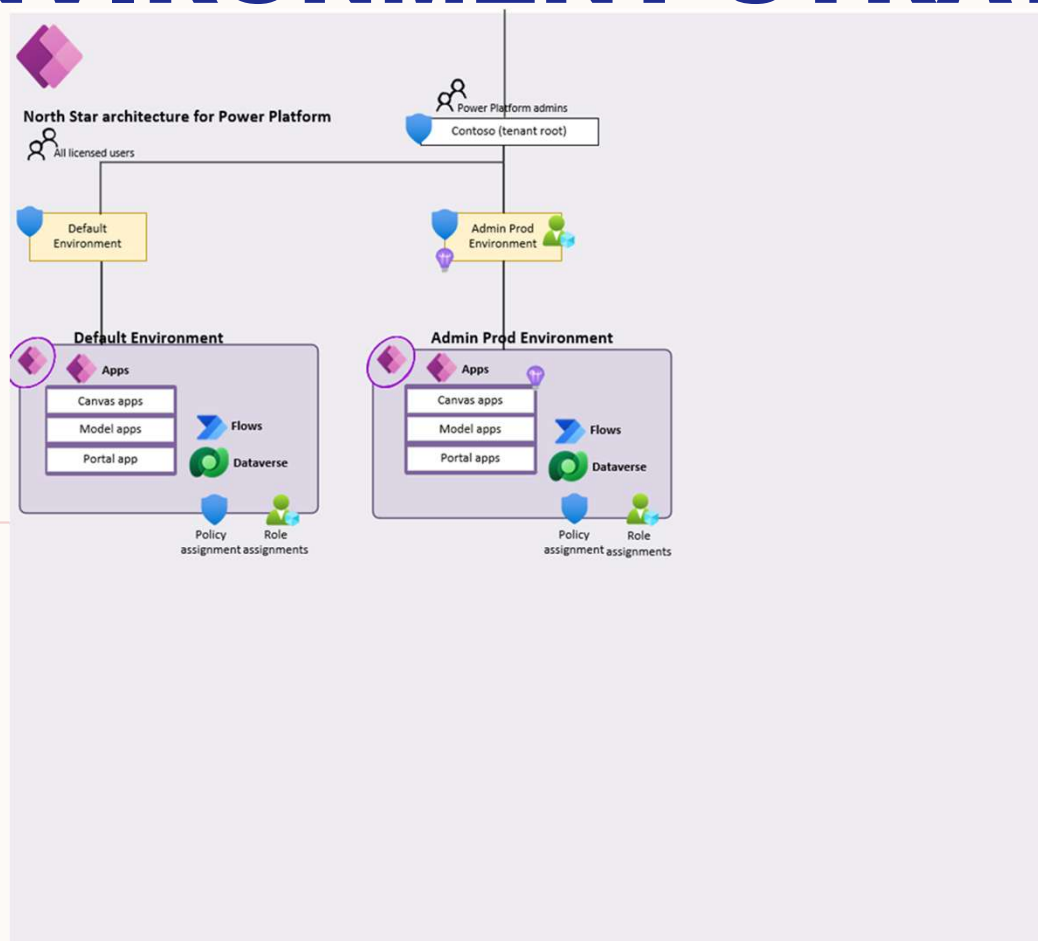

+ the Default environment

ENVIRONMENT STRATEGY

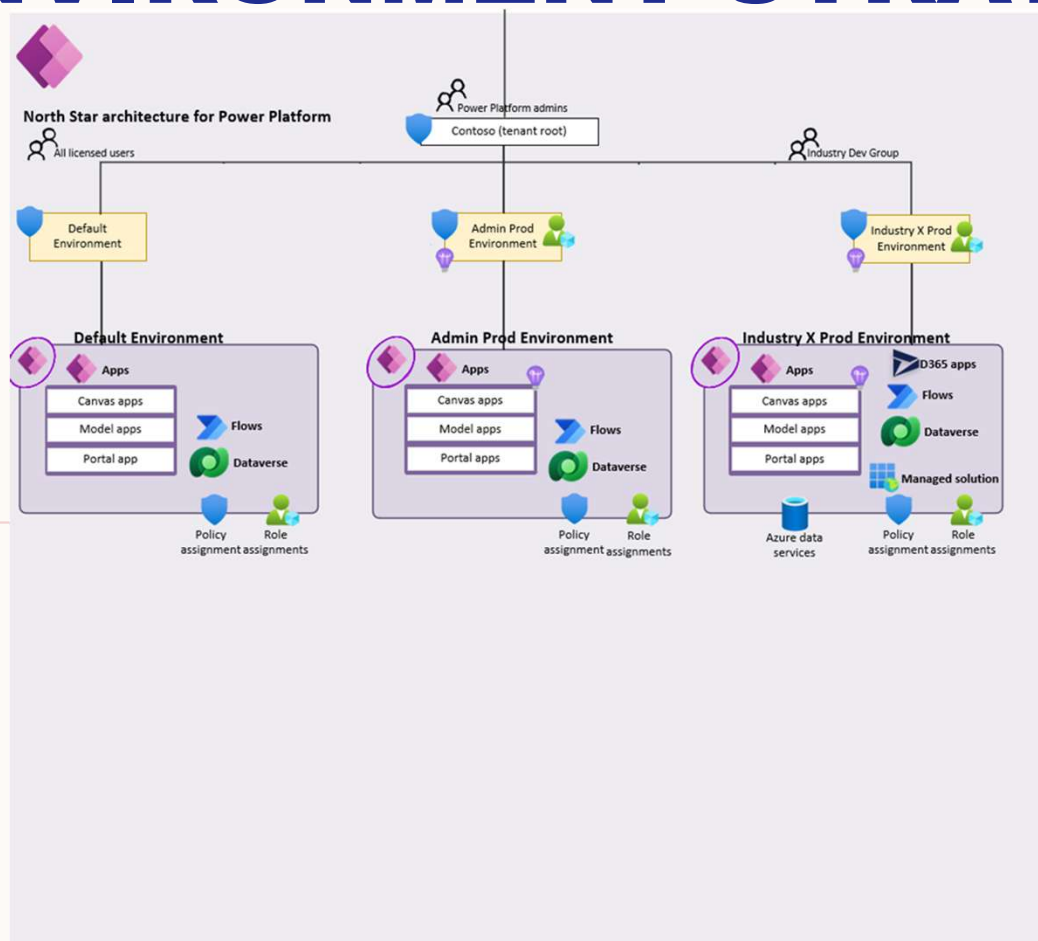

[Reference Architecture and Landing Zones for Power Platform - Microsoft Power Platform Blog](#)

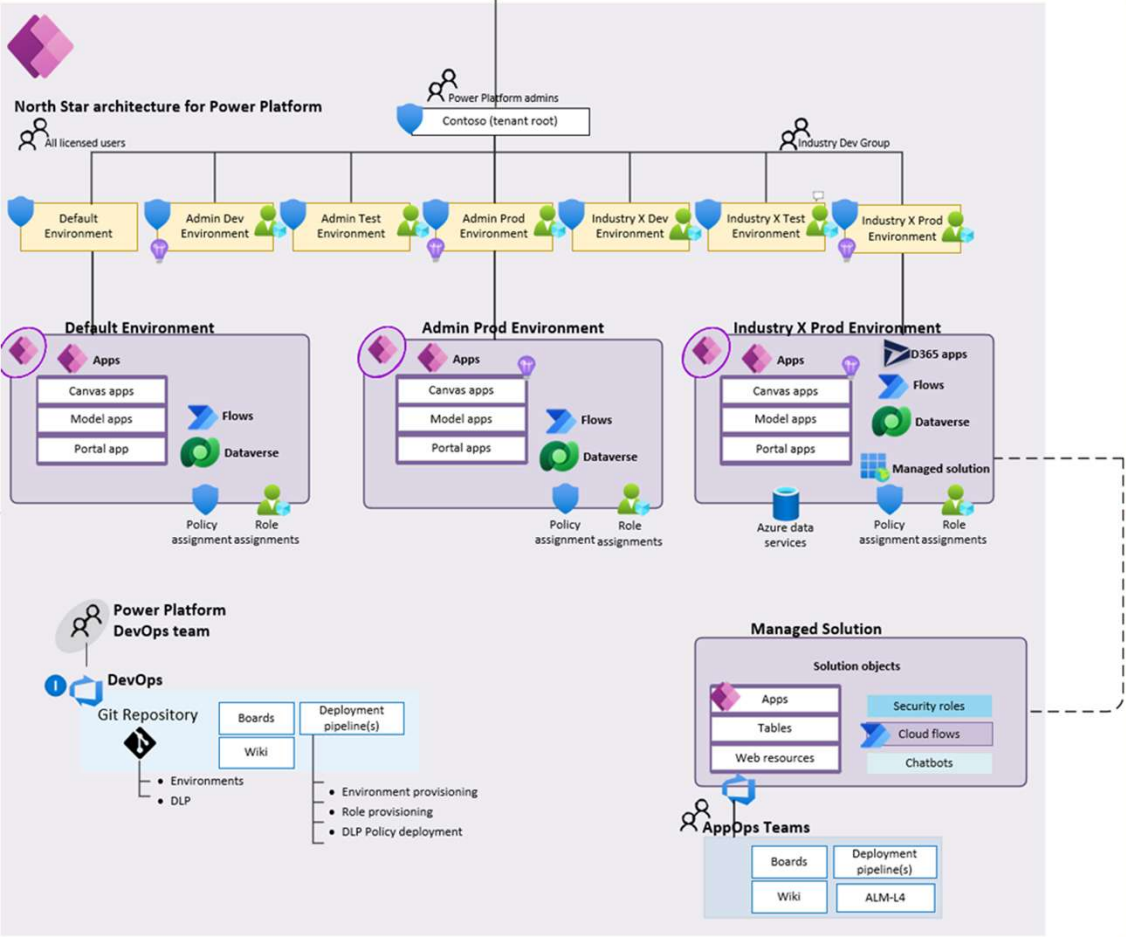

ENVIRONMENT STRATEGY

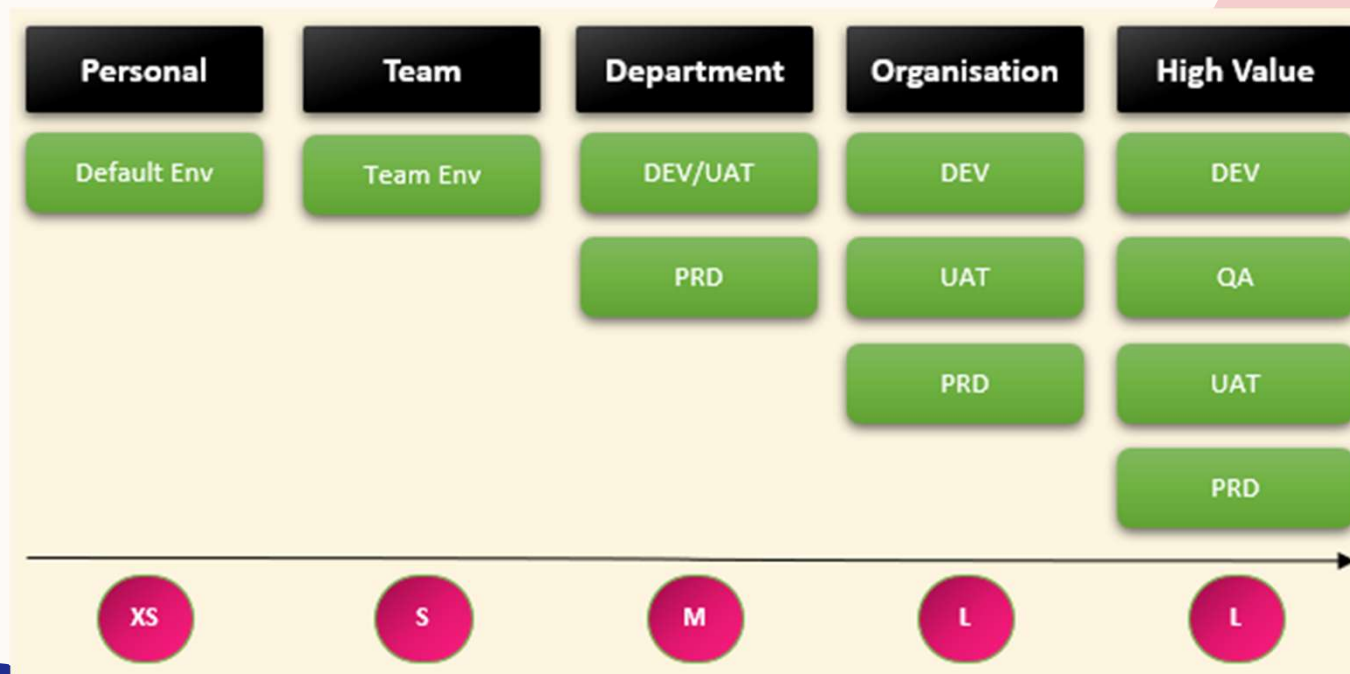

ENVIRONMENT STRATEGY

ENVIRONMENT STRATEGY

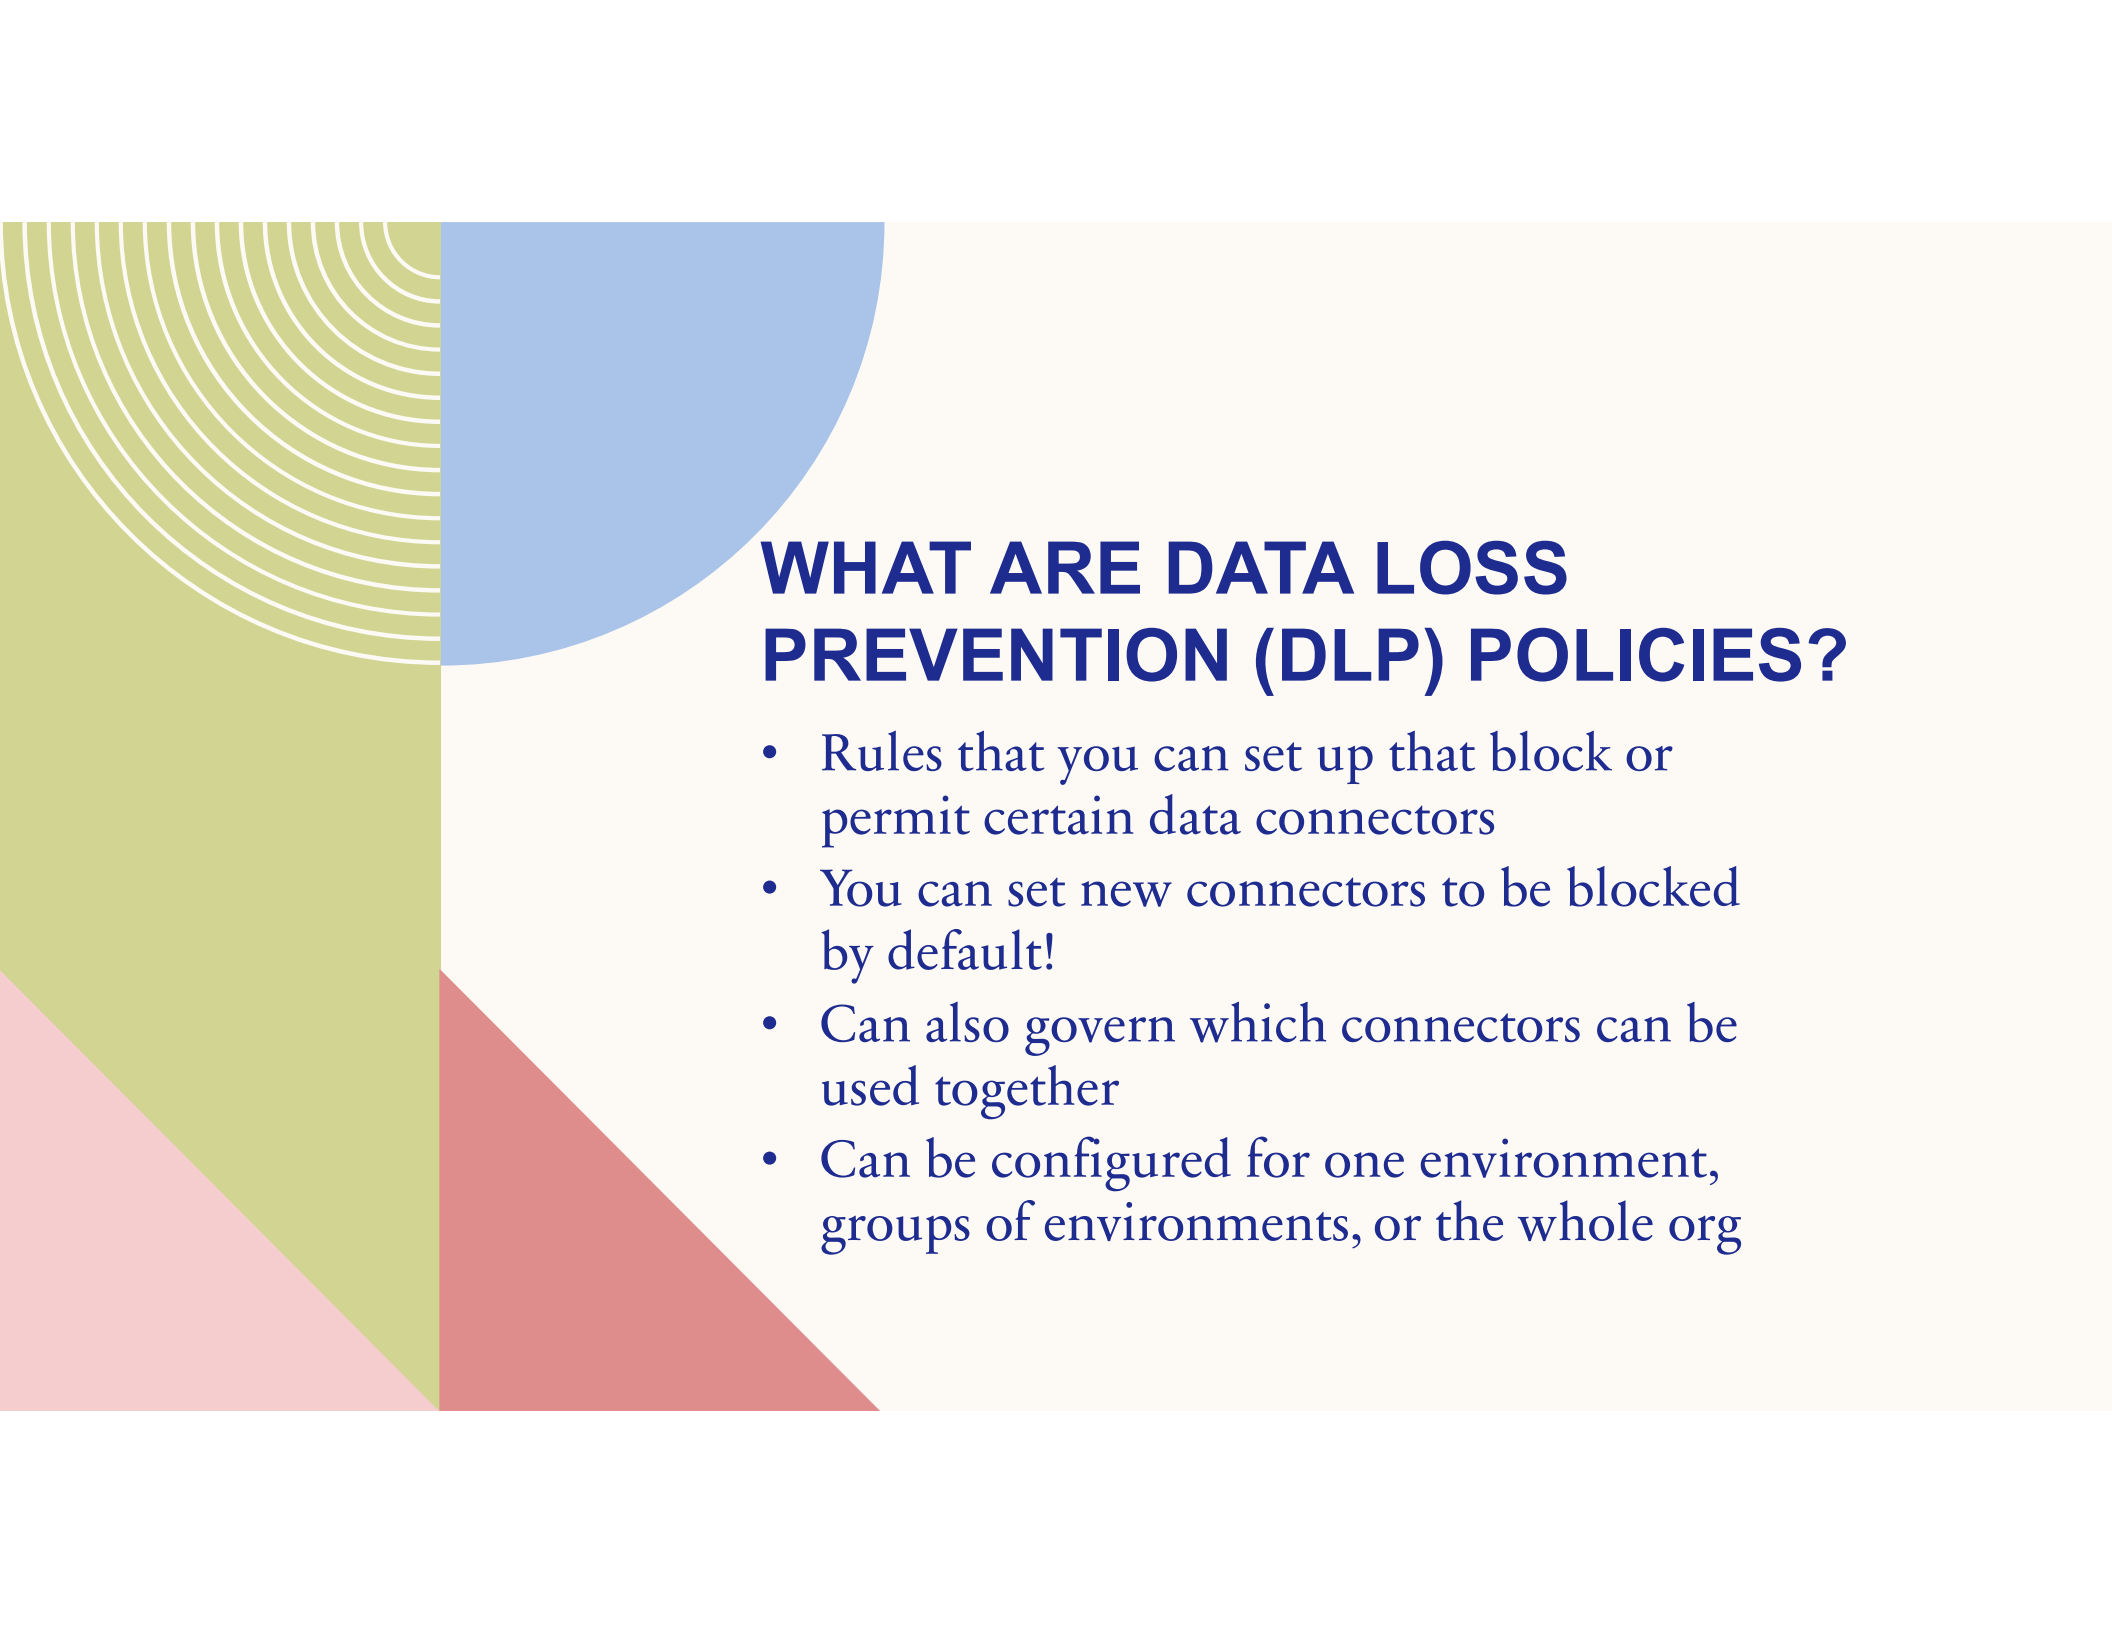

CONSIDER T-SHIRT SIZING

Courtesy of Craig White

THE DEFAULT ENVIRONMENT

- Can't be deleted
- Can't back it up or properly restore it
- Recommendation is to rename it from "Org name (default)" to "Personal Productivity" or "Contoso Productivity" so users know it isn't a private environment
- Use a strict DLP policy on your default environment
- Use the CoE Starter Kit to clean up orphaned and inactive flows and apps
- Use the CoE Starter Kit to identify flows and apps that are popular to the point of becoming business-critical

WHAT ARE DATA LOSS PREVENTION (DLP) POLICIES?

- Rules that you can set up that block or permit certain data connectors
- You can set new connectors to be blocked by default!
- Can also govern which connectors can be used together
- Can be configured for one environment, groups of environments, or the whole org

TYPES OF DLP CATEGORIES

BUSINESS CONNECTORS

- Can only be used with other business connectors
- For sensitive data

NON-BUSINESS CONNECTORS

- Cannot be used with Business connectors
- For non-sensitive data
- Non-blockable
Microsoft connectors can go here

BLOCKED CONNECTORS

- Cannot be used at all by anyone
- Can set this to be the default for new connectors in your default environment

So if...

SharePoint and Salesforce are in **Business**
Outlook.com is in **Non-Business**
Facebook is in **Blocked**

Connector Matrix	SharePoint	Salesforce	Outlook.com	Facebook
SharePoint	✓	✓	✗	✗
Salesforce	✓	✓	✗	✗
Outlook.com	✗	✗	✓	✗
Facebook	✗	✗	✗	✗

LINDSAY TRYING TO TEACH

OTHERS ABOUT SECURITY ROLES

WHAT ARE SECURITY ROLES?

- Security roles are assigned to users based on their responsibilities and needs.
- By assigning roles, administrators can manage user privileges efficiently, ensuring that users have appropriate access to resources while safeguarding sensitive information from unauthorized access.

ALL YOU NEED

ENVIRONMENT/ SYSTEM ADMIN

Perform all administrative actions on an environment

View and manage all resources created in an environment.

ENVIRONMENT MAKER

Can create new resources associated with an environment. Need at least this to see an environment.

(apps, connections, custom APIs, gateways, and flows)

SYSTEM CUSTOMIZER

Has full permission to customize or administer the environment.

Can view all custom table data in the environment.

can only view records that they create in Account, Contact, Activity tables.

BASIC USER

Can run an app in the environment and perform common tasks on the records they own.

It has privileges to the core business tables, such as Account, Contact, and Activity.

APPROVALS USER

When users create or are assigned approvals, they are internally assigned the "Approvals User" role.

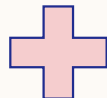

It happens automatically in Default; in others, you may need to adjust.

ALL YOU NEED

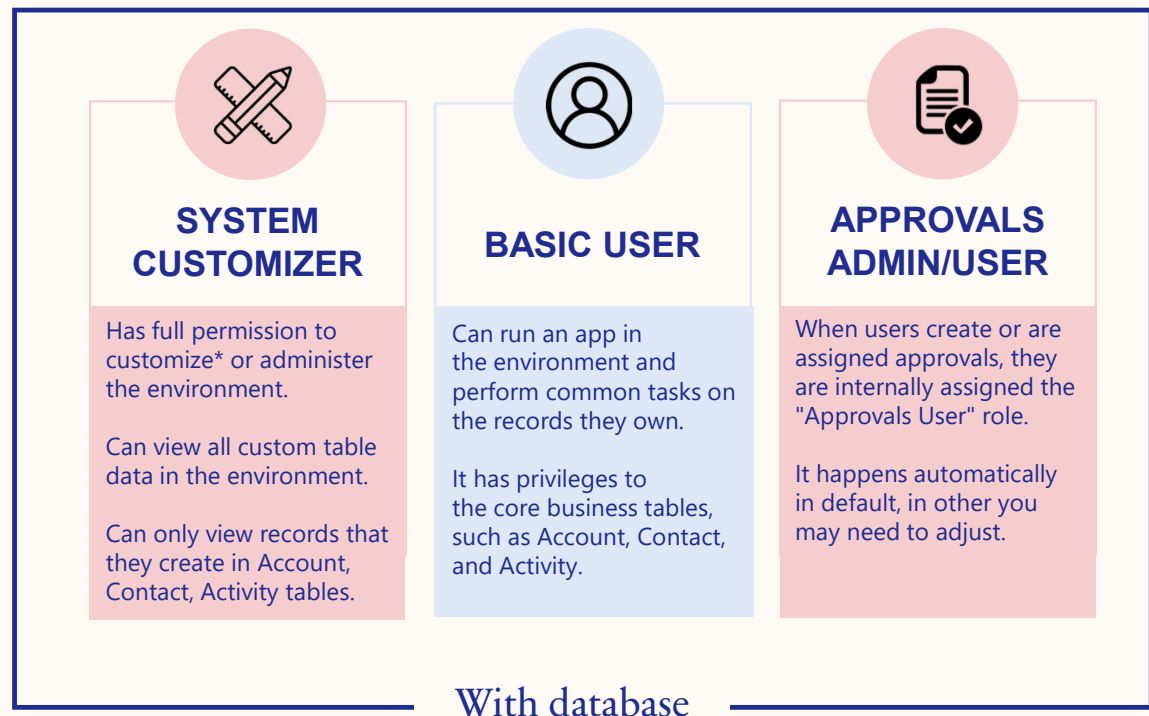

* ability to create or edit tables, relationships, fields, views, charts, dashboards in Dataverse 35

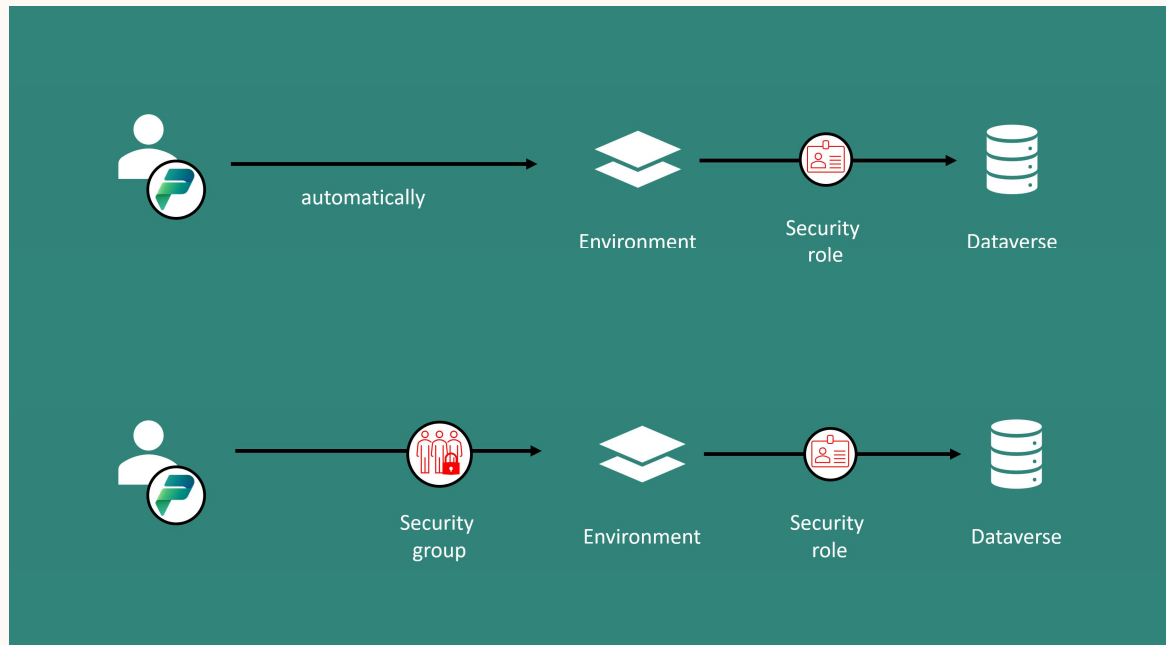

access to the environment

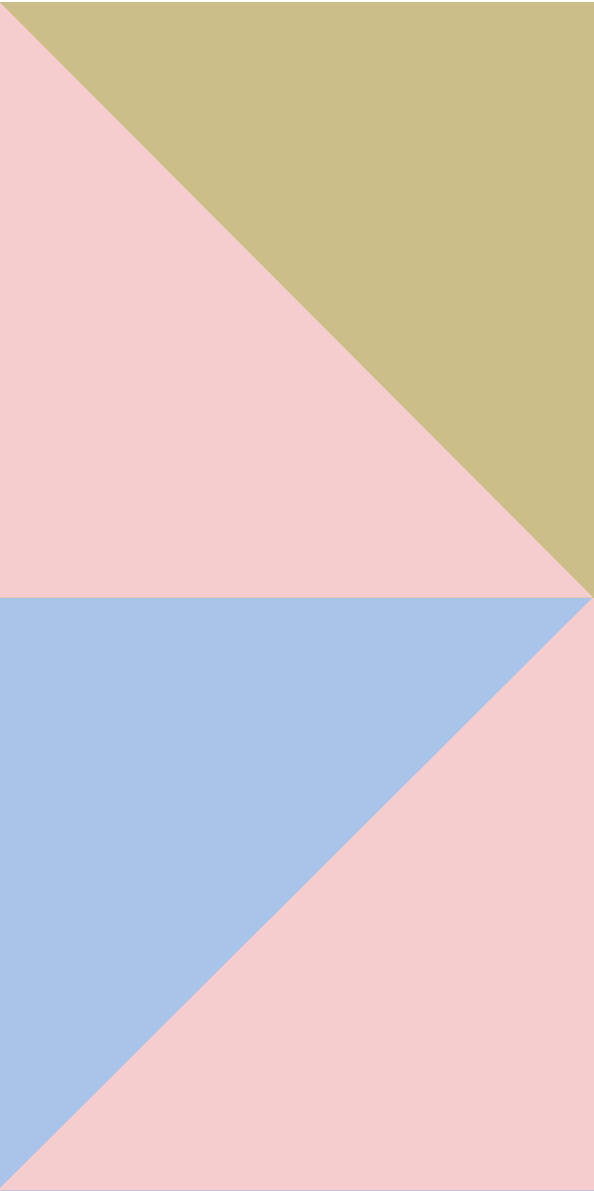

access to the database

IMPLEMENT SECURITY GROUPS

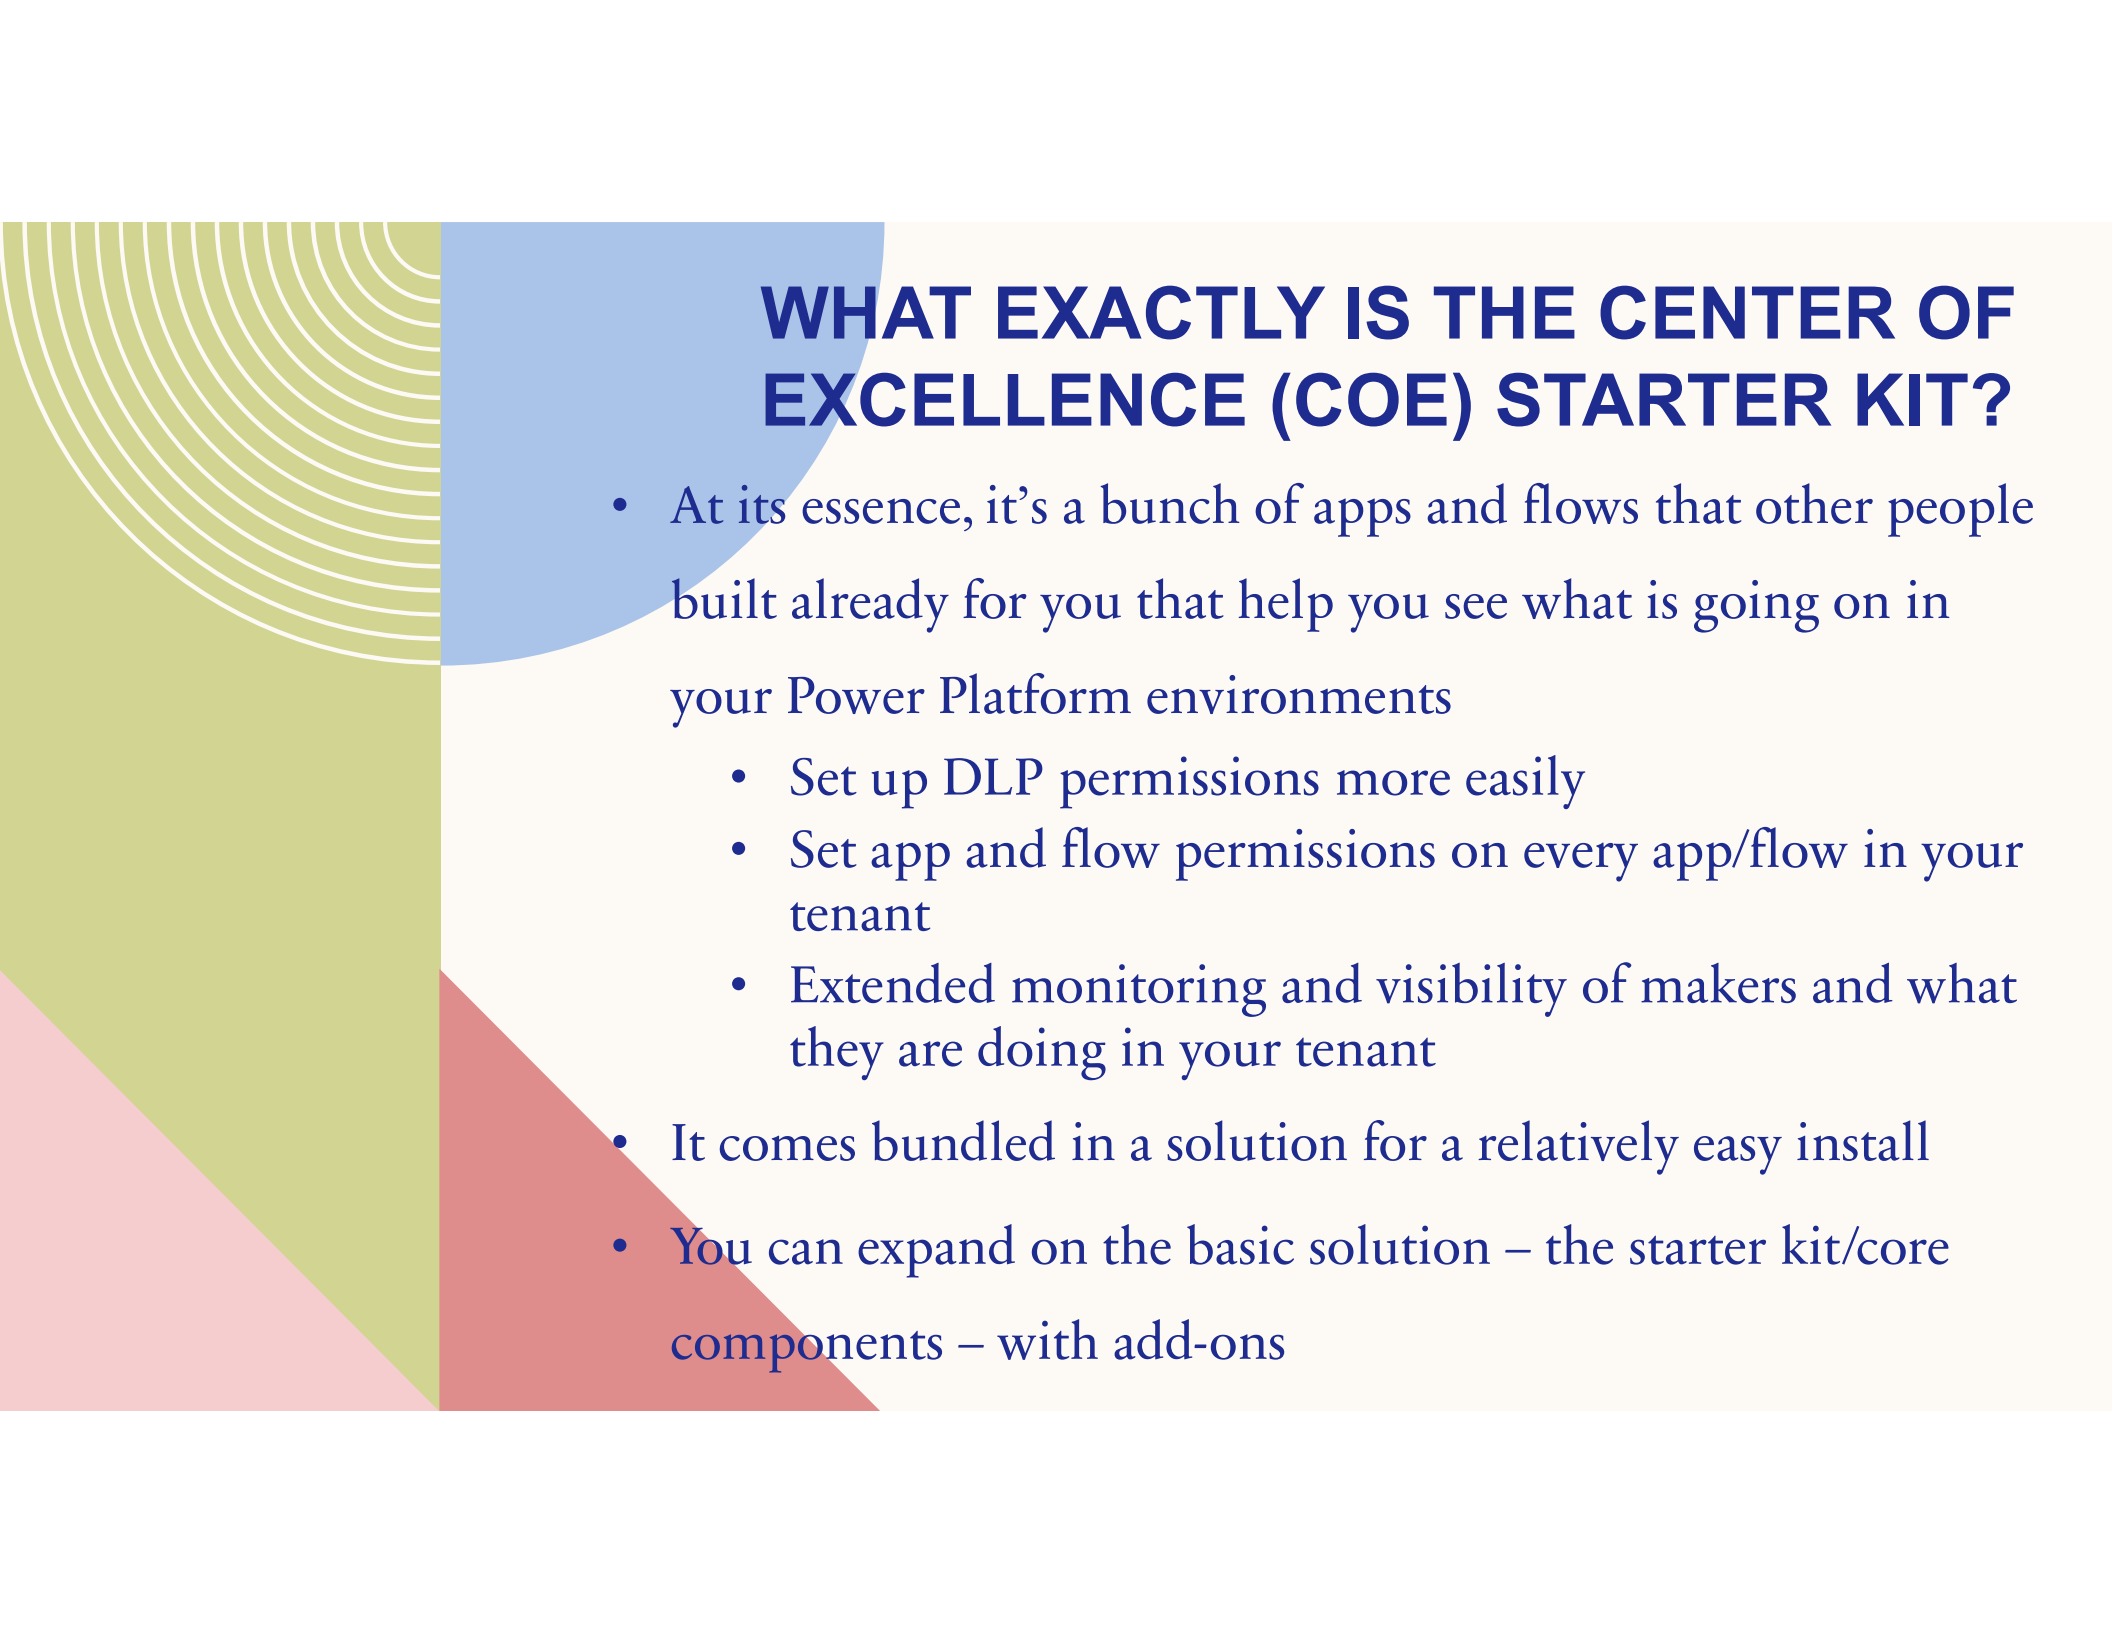

Courtesy of Michael Roth

IMPLEMENT SECURITY GROUPS

- Security group: Ensure that users are not automatically added to an environment.
- Security roles: Restrict users from accessing resources within an environment.
- Can use M365 groups, Azure Security groups most commonly (M365 are mail-enabled)

Courtesy of Michael Roth
<https://www.michaelroth42.com/post/2022-07-03-set-up-security-groups-for-your-environments/>

WHAT EXACTLY IS THE CENTER OF EXCELLENCE (COE) STARTER KIT?

- At its essence, it's a bunch of apps and flows that other people built already for you that help you see what is going on in your Power Platform environments
 - Set up DLP permissions more easily
 - Set app and flow permissions on every app/flow in your tenant
 - Extended monitoring and visibility of makers and what they are doing in your tenant
- It comes bundled in a solution for a relatively easy install
- You can expand on the basic solution – the starter kit/core components – with add-ons

PLUS!

You can extend the CoE even further with:

- Governance components, requesting makers to justify business use cases, app quarantine and inactivity notifications
- Nurture components, sending out surveys, Training in a Day templates, newsletter capabilities
- Theming components, developing a custom theme for your org for apps
- Application Lifecycle Management components for DevOps purposes

ONLY DOWNSIDE – TAKES A WHILE TO INSTALL.

Email Makers

Compose an email to inform makers about planned upcoming changes to DLP policies that impact their apps and flows.

Action required: Upcoming data policy changes impact your Power Apps and Power Automate resources

Format

B / U |

...

We are planning changes to Power Platform data policies. You are an owner of apps and flows that are no longer compliant with the changed data policies. Review your apps and flows and take the required action within **30 days**. If no action is taken within the next 30 days, the data policy will be applied and your apps and flows will be suspended as non-compliant.

Required action:

- Delete the app or flow if you no longer need it.
- Remove the conflicting connectors from the app or flow to bring it into

Cancel

Send email

REQUIREMENTS FOR THE COE

52

- Licenses (the biggest hurdle for my non-profit)
 - Each acct that works with the CoE's apps needs Power App/Automate Per User license OR each separate CoE app needs Power Apps Per App license
- Admin Requirements
 - Power Apps/Automate Per User License (no trials)
 - M365 license
 - Power Platform service admin, or global tenant admin (NOT behind PIM)
 - Be mailbox enabled

COE SETUP

It's recommended that you give the CoE its own environment

(It's also recommended to have a Test CoE environment – who knew?)

When setting up the environment:

Type: Production

Create a Database?: Yes

Include Sample Apps/Data?: No

Restrict with Security Group?: No

COE SETUP

- If you are nervous about setting up the CoE, there are YouTube videos of people setting it up and going through every single step!
- There is now a Setup Wizard! Yay!
- There are usually monthly updates to deploy, but it's mostly just importing new solutions

Center of Excellence Setup Wizard
A setup wizard provides a guided step by step experience to configure the CoE Starter Kit.

Confirm pre-requisites

The CoE Starter Kit requires access to your tenant's Power Platform environments. Therefore, the identity you set up the CoE Starter Kit prerequisites before continuing:

Requirement	Status
Microsoft Power Platform service admin, global tenant admin, or Dynamics 365 service admin.	⚠️ Verify manually
Power Apps Per User (non-trial) license	✅ Success
Microsoft 365 license	✅ Success
Power Automate Per User (non-trial) license	❌ Fail
eMail enabled	✅ Success

Progress:

- Confirm pre-requisites
- Configure communication methods
- Configure mandatory settings
- Configure inventory data source
- Run setup flows
- Run inventory flows
- Share apps
- Publish Power BI dashboard
- Finish

TIPS AND TRICKS (AND PITFALLS)

AVOID PITFALLS

1. Cleaning up can be a lot
2. Think before you click
3. Environment overload
4. Do a good job

BIGGEST TAKEAWAYS SEVERAL YEARS LATER

- Once the governance is set up and set up right, there's not much else that you need to do on a daily basis with it other than review your dashboards (depending on size of org and adoption)
- Adoption can be a slow, but rewarding, process
- Make sure you have an open point person for makers to reach out to
